yaiw protein - Escherichia coli (strain K-12)
Cispecies: Escherichia coli
Cispecies: Escherichia coli
Cispecies: Escherichia coli
Ciscession: 12-Sep-1997 #sequence_revision 17-Sep-1997 #text_change 01-Mar-2002
Ciscession: E4766

CORRECTED DESCRIPTION PA2695 [imported] - Pseudomonas aeruginosa (strain PAO1)
C'Species: Pseudomonas aeruginosa
C'Species: Pseudomonas aeruginosa
C'Species: 15-Sep-2000
Bracession: G83309

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Gaps
Prolactin-releasing peptide precursor (PrRP) (Prolactin-releasing hormone) [Contains: Prolactin-releasing peptide PrRP31; Prolactin-releasing peptide PrRP20].
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      IsoId=P81278-2; Sequence=VSP 004370;
-!- TISSUE SPECIFICITY: Widely expressed, with highest levels in medulla oblongata and hypothalamus.

Proc. Natl. Acad. Sci. U.S.A. 90:6150-6154(1993).

-!- FUNCTION: Visual pigments are the light-absorbing molecules that mediate vision. They consist of an apoprotein, opsin, covalently linked to cis-refinal.

-!- SUBCELLULAR LOCATION: Integral membrane protein.

-!- FISSUE SPECIFICITY: LATERAL EYE.

-!- PTM: Some or all of the carboxyl-terminal Ser or Thr residues may be phosphorylated (By similarity).

-!- MISCELLANEOUS: THIS OPSIN HAS AN ABSORPTION MAXIMUM AT 520 NM.

-!- SIMILARITY: Belongs to family 1 of G-protein coupled receptors.

Proc. Natl. Acad. Sci. U.S.A. 90:6150-6154(1993).

- PUNCTION: Visual pigments are the light-absorbing molecules that mediate vision. They consist of an apoprotein, opsin, covalently linked to cis-retinal.

- SUBCELLIUAR LOCATION: Integral membrane protein.

- SUBCELLIUAR LOCATION: Integral membrane protein.

- PTM: Some or all of the carboxyl-terminal Ser or Thr residues may be phosphorylated (By similarity).

- MISCELLANEOUS: THIS OPSIN HAS AN ABSORPTION MAXIMUM AT 530 NM.

- SIMILARITY: Belongs to family 1 of G-protein coupled receptors.
                                                                                                                                                                                                                                                                                                                                                                                                                                          Gaps

COMPLEX (COMPONENT OF THE UBIQUINOL-CYTOCHROME C REDUCTASE
COMPLEX (COMPLEX III OR CYTOCHROME B-C1 COMPLEX), WHICH IS A
RESPIRATORY CHAIN THAT GENERALES AN ELECTRCHEMICAL POTENTIAL
COUPLED TO ATP SYNTHESIS (BY SINILARITY)

COUPLED TO ATP ROWING (BY SINILARITY)

COUPLED TO THE RESERVE PROFIEN (BY SINILARITY)

COUPLED TO THE MAIN SUBUNITS OF COMPLEX B-C1 ARE: CYTOCHROME B,
CYTOCHROME C1 AND THE RIESKE PROFIEN (BY SINILARITY)

COUPLED TO AND THE RIESKE PROFIEN (BY SINILARITY)

COUPLED TO THE MAIN SUBUNITS OF COMPLEX B-C1 ARE: CYTOCHROME B,
CYTOCHROME C1 AND THE CYTOCHROME B FAMILY.

BEMBL; AJ318501; CAC44960.1; -

COUPLED TO ATP SYNTHESIS (BY SINILARITY)

COUPLED TO THE PROFIENT OF MEMBLE BEAUTY (CHAIN; TEA.

COUPLED TO THE PROFIENT OF MEMBLE BEAUTY (CHAIN; TEA.

COUPLED TO THE PROFIENT OF THE CYTOCHROME B,
COUPLED TO THE CYTOCHROME B,
CY
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            .

This sequence represents a peptide fragment from a novel human type ligand polypeptide corresponding to amino acid residues 34 to 53 of the sequence represented in AMM1390 and is used in an assay to monitor ligand binding to the G protein-coupled receptor protein. Pharmaccutical compositions containing this ligand may be used as a pituitary function modulator, a central nervous system modulator or a pancreatic function modulator. This ligand could have specific applications as a prophylactic or therapeutic agent for dementia, depression, hyperkinetic syndrome, clizophrenia, trauma, growth hormone secretory disease, hyper- and polyphagia, hyperlipidaemia, hypercholesterolaemia, hyperglyceridaemia, hypercholaesterolaemia, hyperglyceridaemia, hyperprotactinaemia, asthma, cancer, panoreatitis, spinal injury, transient brain ischaemia, epilepsy, amylotrophic lateral sclerosis, acute myocardial infarction, infertility, spinal plantia, hyperglycardial infarction, infertility, spinal consensed in also be developed to screen compounds which are capable of altering the binding activity of the ligand affecting activation of the G protein-coupled receptor protein
                                                                  ö
                                                                                                                                                                                                                                                                                                                                      G protein-coupled receptor; ligand binding; pharmaceutical; modulator; pituitary; central nervous system; pancreas; prophylactic; therapeutic agent.
                                                                  Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Ligand peptide for G protein-coupled receptor - acts by modulating function in the central nervous system, pancreas and pituitary gland.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Habata Y, Kawamata Y, Hosoya M, Fujii R, Fukusumi S;

The present sequence represents a human type ligand fragment. It is used in the course of the invention. The specification describes an agent for modulating prolactin secretion which comprises a ligand polypeptide or a salt, for a G protein-coupled receptor (GPCR) protein. The agents for promoting prolactin secretion can be used for treating or preventing thypometabolism. They can by used for promoting lactation in a domestic mammal and as an aphrodisiac. The agents for inhibiting prolactin secretion can be used for promoting plutiary adenomatosis, secretion can be used for treating or preventing plutiary adenomatosis, infertility, impotence, amenorates, galactorrhea, acromegaly, Chiarifrommel syndrome, Argonz del Castilo syndrome, Forbes-Albright syndrome, C lymphoma, Sheehan syndrome or dyszoospermia. The inhibitory agents can also be used as contraceptives. The agents for modulating placental
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       function can be used for treating or preventing choriocarcinoma, hydatid mole, irruption mole, abortion, unthrifty fetus, abnormal saccharometabolism, abnormal lipidmetabolism or oxytocia
                                                                                                                                   Rat type ligand; modulation; prolactin secretion; G protein-coupled receptor; GPCF, hypovarianism; gonecyst cacogenesis; menopausal syndrome; euthyroid; hypometabolism; lactation; pituitary adenomatosis; brain tumour; emmeniopathy; autoimmune disease; prolactinoma; infertility; impotence; amenorathes; galactorathea; acromegaly, Chiari-Frommel Syndrome; Argonz-del Castilo syndrome; Porbes-Albright syndrome; lymphoma; Sheehan syndrome; dyscospermia; contraceptive; placentral function; choriocarcinoma; hydatid mole; irruption mole; abortion; unthrifty fetus; abnormal saccharometabolism; abnormal lipidmetabolism; oxytocia.

This invention describes a novel oxytocin secretion-regulating agent which contains a ligand peptide or its salt for the G protein-coupled receptor protein. It is useful in the form of furges for ameliorating, preventing and treating diseases relating to oxytocin secretion e.g. weak pains and atonic bleeding, before and after expulsion of placenta, uterine recovery failure, caesarean section, stoppage of artificial fertilization or galactostasis and is also applicable in veterinary medicine for promoting milk production in cow, goat and pig. This sequence represents a human peptide which acts as an oxytocin secretion
                                          Human, oxytocin secretion promoter, G protein-coupled receptor protein, treatment, disease, pain, atonic bleeding, uterine recovery failure, cow, caesarean section, artificial fertilization, galactostasis, goat, plg, veterinary medicine, milk production.
                                                                                                                                                                                                                                                                                                                                                                                                                              Physiologically-active polypeptide recognized as ligand by G protein-coupled receptor protein, for promoting secretion of oxytocin, as drugs for diseases relating to oxytocin secretion and in veterinary medicine.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Protection, endogenous therapeutic peptide, peptidase, conjugation, blood component, modification, succinimidyl, maleimido group, amino, hydroxyl, thiol; hormone, growth factor, neurotransmitter.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Score 76; DB 3; Length 20;
Pred. No. 3.3e-06;
Mismatches 0; Indels
           Human oxytocin secretion promoting peptide SEQ ID NO: 35.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Prolactin releasing peptide SEQ ID NO:166.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Disclosure; Page 63; 72pp; Japanese

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The invention provides a monoclonal antibody which has a specific reaction with the part peptide of the C-terminal of 19P2 ligand or its derivative. The antibodies can be used in diagnosis or to treat or prevent diseases associated with abnormality in the pituitary function regulatory mechanism (e.g. promotion of prolactin secretion), central mervous regulatory mechanism, and pancreatic function regulatory mechanism entibody-based immunoassay can also be applied in clarifying the physiological functions of the ligand and its derivative. Sequences AAX49290-302 represent peptide fragments of the 19P2 ligand
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     New monoclonal antibodies, useful in diagnosis, as drugs and in studying diseases related to ligand abnormality.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Gaps

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The present invention describes a modified therapeutic peptide (I)

comprising a therapeutically active amino acid region (III) and a

leastive group (II) (e.g. succinimidyl and matehindo groups) attached to

a less therapeutically active amino acid region (IV), which covalently

bonds with amino/hydroxyl/thiol groups on blood components to form a

peptidase stabilised therapeutic peptide composed of 3-50 amino acids.

(I) are useful for modifying therapeutic peptides e.g. hormones, growth

factors and neurotransmitters, to protect them from peptidase activity in

vivo for the treatment of various disorders. Endogenous therapeutic

peptides are not suitable as drug candidates as they require frequent

administration due to rapid degradation by peptidases in the body.

Modifying and attaching therapeutic peptides to albumin prevents or

reduces the action of peptidases to increase length of activity (half

ilfe) and specificity as bonding to large molecules decreases

intracellular uptake and interference with physiological processes.

The method is for producing (low-molecular) peptides e.g. KisS-1 peptide and GPR8 ligand for subsequent applications by the gene recombination technique through tandem repeats to provide a precursor protein with specific cleavage sites. With this method, peptide production can be carried out easily to provide large quantities of the required peptides. This is the amino acid sequence of a peptide associated with the peptide production method of the invention
agonist or antagonist respectively and determining the ability of the compound to promote wakefulness or sleep. The compounds identified from the method are used in the therapy of epilepsy and other diseases associated with absence seizures and in promoting wakefulness and sleep in individuals having sleep disorders such as insomnia and narcolepsy. Prep receptor agonists may be used to treat common disorders which lead to sleepiness, e.g. sleep apnocea, narcolepsy, idiopathic hypersomnia and psychogenic hypersomnia. PrRp receptor antagonists are useful for disorder and psychophysiologic insomnia such as adjustment sleep disorder and psychophysiologic insomnia. The present sequence is human PRRP-31 C-terminal peptide, PrRP-20
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Process for producing peptides e.g. KiSS-1 peptide and GPR8 ligand for subsequent applications by gene recombination technique through tandem repeats to provide precursor protein with specific cleavage sites.
                                                                                                                                                                                                                                                                                                          Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Peptide production by gene recombination associated peptide #30.

This sequence represents a peptide fragment from a novel human type [1] gand polypeptide corresponding to amino acid residues 34 to 54 of the sequence represented in AAW13190 and is used in an assay to monitor [1] igand binding to the G protein-coupled receptor protein. Pharmaceutical isomositions containing this ligand may be used as a pituitary function compositions central nervous system medulator or a paracreatic function modulator. This ligand could have specific applications as a prophylactic or therapeutic agent for dementia, depression, hyperkinetic syndrome, cor disturbance of consciousness, anxiety syndrome, schizophrenia, trauma, growth hormone secretory disease, prince, schizophrenia, trauma, concertisis, arenal disease, Turner's syndrome, neurosis, asthma, concertisis, spinal injury, transient brain ischaemia, epilepsy, amylotrophic lateral sclerosis, acute myocardial infarction, infertility, spinal and egeneration, bone fracture, trauma, atopic dermatitis, spinal and or screen compounds which are capable of altering the binding activity of the compounds which are capable of altering the binding activity of the compounds which are capable of altering the binding activity of the compounds spinal activation of the G protein-coupled receptor protein
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ..

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       This invention describes a novel oxytocin secretion-regulating agent which contains a ligand peptide or its salt for the G protein-coupled receptor protein. It is useful in the form of drugs for ameliorating, preventing and treating diseases relating to oxytocin secretion e.g. weak pains and atonic bleeding, before and after expulsion of placenta, uterine recovery failure, caesarean section, stoppage of artificial fertilization or galactostasis and is also applicable in veterinary medicine for promoting milk production in cow, goat and pig. This sequence represents a human peptide which acts as an oxytocin secretion
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Physiologically-active polypeptide recognized as ligand by G protein-coupled receptor protein, for promoting secretion of oxytocin, as drugs for diseases relating to oxytocin secretion and in veterinary medicine.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           ò
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         100.0%; Score 76; DB 3; Length 21; 100.0%; Pred. The invention describes a method of producing a peptide comprising the excision of the N and C-terminals of a target peptide with enzymes or chemically through the attached cleavage sites repeated by ligation in a precursor protein. The method is for producing (low-molecular) peptide e.g. KiSS-1 peptide and GPRB ligand for subsequent applications by the gene recombination technique through tandem repeats to provide a precursor protein with specific cleavage sites. With this method, peptide production can be carried out easily to provide large quantities of the required peptides. This is the amino acid sequence of a peptide associated with the peptide production method of the invention
                                                       Process for producing peptides e.g. KiSS-1 peptide and GPR8 ligand for subsequent applications by gene recombination technique through tandem repeats to provide precursor protein with specific cleavage sites.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          g protein-coupled receptor; ligand binding; pharmaceutical; modulator;

ligand polypeptide corresponding to amino acid residues 34 to 55 of the sequence represented in AMM3139 and is used in an assay to monitor or ligand binding to the G protein-coupled receptor protein. Pharmaceutical compositions containing this ligand may be used as a pituitary function modulator. This ligand could have, specific applications as a prophylactic or therapeutic agent for dementa, depression, hyperkinetic syndrome, or therapeutic agent for dementa, applications as a prophylactic or therapeutic agent for dementa, appression, hyperkinetic syndrome, correctly disease, hyper and polyphagia, hyperlipidaemia, hypertholesterolaemia, hyperalyseridaemia, hypercolactinaemia, trauma, crancer, pancreatitis, renal disease, Turner's syndrome, neurosis, asthma, concer, pancreatitis, spinal injury, transient brain ischaemia, epilepsy, amylotrophic lateral sclerosis, acute myocardial infarction, infertility, spinal and/or oligogalactia. Assays can also be developed to screen compounds which are capable of altering the binding activity of the compounds which are capable of altering the binding activity of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       This invention describes a novel oxytocin secretion-regulating agent which contains a ligand peptide or its salt for the G protein-coupled receptor protein. It is useful in the form of drugs for ameliorating, preventing and treating diseases relating to oxytocin secretion e.g. weak pains and atonic bleeding, before and after expulsion of placenta, uterine recovery failure, caesarean section, stoppage of artificial fertilization or galactostasis and is also applicable in veterinary
                                                                                                                                                                                                                                                                                                                                                                                                                                       ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Human; oxytocin secretion promoter; G protein-coupled receptor protein; treatment; disease; pain; atonic bleeding; uterine recovery failure; cow; caesarean section; artificial fertilization; galactostasis; goat; pig; veterinary medicine; milk production.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Sequence 15, Application US/09932161

Patent No. US20020037533A1

GENERAL INFORMATION:

APPLICANT: Civelli, Olivier

APPLICANT: Lin, Steven

TITLE OF INVENTION: Screening and Therapeutic Methods For
TITLE OF INVENTION: Promoting Wakefulness and Sleep

FILE REFERENCE: P-UC 4679

CURRENT APPLICATION UNBER: US/09/932,161

CURRENT FILING DATE: 2001-08-17

PRIOR APPLICATION UNBER: US 09/560,915

PRIOR APPLICATION NUMBER: US 09/560,915

NUMBER OF SEQ ID NOS: 24

NUMBER OF SEQ ID NOS: 24
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Query Match

September Second Masato

APPLICANT: Moriya, Takeo

APPLICANT: Tanaka, Yakeo

APPLICANT: Tanaka, Yakeo

APPLICANT: Moriya, Takeo

APPLICANT: Mishimura, Osamu

TITLE OF INVENTION: METHOD OF PRODUCING A 19P2 LIGAND

NUMBER OF SEQUENCES: 52

CORRESPONDER ADDRESS:

ADDRESSED: DIKE, BRONSTEIN, ROBERTS & CUSHWAN, LLP

STRAET: 130 Water Street

CITY: BRONSTEIN, ROBERTS & CUSHWAN, LLP

STRAET: MA

COUNTRY: READABLE FORM:

MEDIUM TYPE: PLOPS/Mb-DOS

COMPUTER: IBM PC compatible

OPERATING SYSTEM: PC-DOS/Mb-DOS

SOFTWARE: PatentIn Release #1.0, Version #1.30

CURRENT APPLICATION DATA:

APPLICATION NUMBER: US 09/105,678

FILING DATE: 26-UN-1998

APPLICATION NUMBER: US 09/105,678

FILING DATE: 27-UN-1997

ATTORNEY/AGENT INFORMATION:

NAME: Conlin, David C

RESERRICE/DOCKET NUMBER: 48466-342

TELERRONG POSTERISTICS:

LENGTH: 31 anino acids

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
